

Where Did Hornet Juice® Come From?

Hornet Juice® is based on the same nutrient system used by giant hornets, who can fly 60 miles in a single day. Their secret? Metabolism of fat.

Adult hornets feed on a juice secreted by hornet larvae, which gives them energy for their incredible flights of endurance.

Asian Giant Hornet (Vespa Mandarina)

With bodies no bigger than 5cm, adult hornets can fly 60 miles in a single day at 20 miles per hour. This is equivalent to a human running over two full marathons every day.

The source of this energy is a liquid secreted by hornet larvae, which the adult hornet feeds on. This "hornet juice" gives them the stamina to complete these remarkable feats of endurance.

What Makes Hornet Juice® Different From Other Sports Nutrition Products?

Most sports nutrition products function as a fuel. They replace energy that has been lost through exercise by replenishing the body's glycogen stores.

This is principally done by eating and/or drinking high carbohydrate foods, gels, bars and drinks.

Hornet Juice® works differently, not as a fuel, but acting as a trigger for the oxidation of fat. Hornet Juice® helps your body metabolize its store of fat for energy, thereby preserving your glycogen stores.

Hornet Juice® does not replace your existing sports nutrition program, but works to complement it.

How Do I Take Hornet Juice®?

Mix one 15g packet of the Hornet Juice® powder with 250 ml/8.5 fl.oz of water, juice or your favorite electrolyte/sports drink.

Drink the mixed Hornet Juice® anywhere between 0 and 45 minutes before the start of your physical exercise.

Our Guarantee

Your satisfaction with Hornet Juice® is our top priority. If for whatever reason you are not happy with your purchase then you can return it for a refund.

in Common?

What Do a Marathon Runner, Boxer and Football Player Have in Common?

They all depend on the same nutrient system as the giant hornet for their energy and endurance... by drinking Hornet Juice®.

Enhance Your Athletic Performance

Hornet Juice® is a scientific sports drink with a unique combination of 17 amino acids, which you take before and during training and/or competition, to get an astonishing boost in your athletic performance...whatever your sport.

Mix one 15g sachet of the Hornet Juice® powder with water or other sports drink 0 - 45 minutes before starting exercise.

Use Fat to Increase Your Endurance

Your body has abundant reserves of fat, which Hornet Juice® helps convert into long lasting energy as soon as you start your physical activity.

- ✓ Increase your energy and endurance.
- ✓ Reduce your muscle fatigue and lactic acid build-up.
- ✓ Improve your recovery for your next training session.
- ✓ Lose extra body fat when exercising.
- ✓ Reduce your perceived effort and heart rate during physical activity.
- ✓ Achieve sudden bursts of energy when you require.
- ✓ Better maintain hydration during physical activity.
- ✓ You will find training and competition easier because you'll feel stronger.

How Does Hornet Juice® Work?

Your body has two primary sources of energy - glycogen and fat.

Glycogen is easily burned in a short period of time and serves as a source of stamina in events that require a burst of energy.

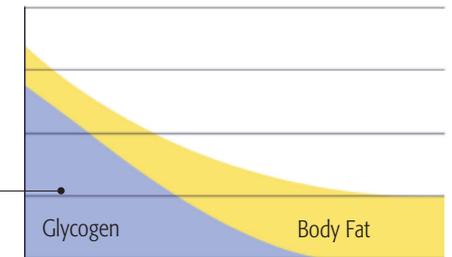

The disadvantage with this is the limited amount of glycogen reserves your body has. Your stores of glycogen are not sufficient to provide energy during exercise of long duration.

Conversely, fat is stored in abundance by the body, although it is generally difficult to convert into energy, requiring large amounts of oxygen to do so.

Hornet Juice® works by quickly converting your body fat into a supply of energy during exercise.

Energy Consumption WITHOUT Hornet Juice®

Without Hornet Juice® your body's energy comes from glycogen, which is insufficient to provide energy for exercise of long duration. Once your glycogen is depleted you become tired with muscle fatigue.

With Hornet Juice® your body's most abundant source of energy, fat, is used right from the start of exercise. This preserves your precious glycogen stores, enabling them to be called upon when sudden bursts of energy are needed. Using fat as an energy supply allows you to exercise stronger for longer.

Energy Consumption WITH Hornet Juice®

Glycogen is reserved, enabling a steady pace of exercise to the very end and bursts of power when needed.
